What's New In?

Remove and Reorder Annotations: Remove and reorder annotations in your drawings to remove clutter and focus on your design. Use the same drag and drop functionality that you already know from the menu bar to organize your annotations.

Ruler Snap: Use the Ruler Snap feature to snap to specific points on your drawing when you draw in the rightmost window. You can also snap to existing annotations, marking. You can create customized snap settings to snap to only specific points when the mouse is over your drawing.

3D Modeling Improvements: Use the new 3D Modeling feature in AutoCAD 2023 to create complex models in seconds. (video: 2:48 min.)

3D PDF Export: Save 3D PDFs using your existing PDF exporting settings. Export your 3D models in the 3D PDF format and save them directly to a file. Share your 3D PDFs easily with people using other file formats, such as .eps and .stl.

Callouts: Select and copy annotations and use the Callout feature to add them to your drawings. Share your callouts with others, and see their positions relative to your model. Add annotations to your drawing directly from the Callout pane. (video: 2:08 min.)

Audit Trail: Send comments, annotations, and tracking history to Team White. You can access this history in any drawing, which makes it easy to bring the information you need into a new drawing.

Review Changes in Files: From the Review Changes in Files menu, select a drawing and review changes for the selected drawing. This view displays the latest changes to a drawing and allows you to review and accept, reject, or change the changes.

On-screen Previews: You can now preview what the next view will look like before you accept the change.

Improved Graphics User Interface: View 3D content with simple, easy-to-understand terminology, like "Layer" and "Surface." With a single click, you can switch between viewing your drawing as a 3D model or as an image.

Collapse/Expand Grids: A vertical or horizontal grid is now collapsed by default, but you can show or hide the grid by clicking the Grid toggle button on the View tab. (video: 1:58 min.)

Layout Improvements:
