management,...Q: Select and
add from MySQL to array in

JavaScript I want to use javascript to read data from a MySQL database. I have a database with two tables one user and one user_invited. When a user is invited another user can see his information, but he can not access the data of his own table. So when I get the "id", i.e. user_id in my result set from my database, I want to add that id to an array and then show the data of that

user using AJAX. To get the data I'm using a php file for AJAX. I can add everything in JavaScript, but I get always into an infinite loop. I know you guys are smart, and I thank you for your help. The code:

```
function getData(user_id) {  
$.ajax({ url: "showInvited.php",  
data: {user_id : user_id}, type:  
"post", dataType: "json",  
success: function(data) { var  
array = new Array(); //here I
```

can add all the data

```
//array.push(data); //returns:
```

```
//{id:1234, name:john, age:25 }
```

```
document.getElementById("feed").innerHTML= " "+data;
```

```
//returns: //{"id
```
