History Early AutoCAD versions were limited to DDA (Design Definition Archive) files. The first release of AutoCAD was in 1986, with the first multi-user version in 1990. Early AutoCAD's core functionality was based on Digital Computer Graphics (DG). The initial release supported only simple DXF files which, along with VPL files, supported "complex" data types. The use of AutoLISP enabled a large set of functions to be available in the application's graphical user interface (GUI) and menu. In the early 1990s, an early version of the MacDraw operating system was based on the AutoCAD technology. The name AutoCAD was inspired by the term AutoCADnet, an early version of the Internet, which was used by the company that developed the software. The first AutoCAD product was known as AutoCADnet; an early version of AutoCAD was known as AutoCAD and a later release became AutoCAD Modeler. An early version of AutoCAD also appeared as AutoCAD LT. Autodesk later acquired the rights to the original AutoCAD name. The move to a graphical user interface (GUI) was also necessary for the company to support the Windows environment which was becoming increasingly popular in the 1990s. Later releases were renamed to reflect the release date, with such releases including AutoCAD 2000 and AutoCAD 2009. AutoCAD 2009 was also the first version to support the Mac and Linux ca3bfb1094
