Silver(0) supported cobalt nanoparticles were successfully prepared by a one-pot hydrothermal method with polyvinylpyrrolidone (PVP) as a stabilizer. The Ag(0) supported cobalt nanoparticles with an average size of 4.5 nm were characterized by X-ray diffraction, transmission electron microscopy (TEM), X-ray photoelectron spectroscopy (XPS), UV-Vis diffuse reflectance spectra, and X-ray photoelectron spectroscopy (XPS). Then the obtained Ag(0) supported cobalt nanoparticles were used as photocatalysts for the degradation of Rhodamine B (RhB) under solar light. The experimental results showed that the Ag(0) supported cobalt nanoparticles were highly efficient for the photodegradation of RhB under solar light. The increased first-order rate constant of the catalyst is 200 times higher than that of the Co(0) nanoparticles without surface modification and 10 times higher than that of the TiO_2 nanoparticles. Game Changer G4 Game Console for the iPhone, iPod and iPad When it comes to games for the iPhone, iPod and iPad, many players will agree that there's very little to beat the gaming experience offered by Apple's iOS platform. If you're looking for a way to get more out of your iOS devices then Game Changer G4 is the perfect solution. The G4 does have an LED indicator light that lets you know the battery life. You can also read the time through the face, and change the volume through it as well. Use The Game Changer G4 is powered using a dedicated Micro USB cable. It can be charged using the iPhone or iPod touch. With the XBox Game Pad, you're able to control the games that are played through the G4. This makes it very easy to use. With the G4 plugged into the iOS device, you can play a number of games.
