Players can manually tinker with a number of technical aspects of in-game combat through a series of adjustable controls, including the number of meters per tackle, the size of the tackle box and the fact that you can only tackle using the left or the right foot. Alongside this, the game also uses a new “Semi-Active Control” feature, which allows players to utilise an air-traffic collision avoidance system. Players can make use of this feature when they see the flight path of a ball, and it will automatically initiate a tackle and take the ball away if the two collide. Additionally, the new “Start” and “Style” modifiers included in the game will also contribute to the range of tactical strategies available to managers. FIFA 22 will be released worldwide on September 28th, 2015 for Xbox One, PS4, Xbox 360 and PS3. MATLAB Coder
