MS Access To PostgreSQL Crack [32|64bit]

MS Access To PostgreSQL is a user-friendly piece of software that provides users with the possibility to convert their Microsoft Access Databases to PostgreSQL files. The program allows users to perform the conversion even if they do not possess advanced computer skills, but it does require for them to be already connected to the Access database. Provided that the database is password protected, users also need to provide their login credentials for a successful conversion operation. A wizard-like interface With the help of this utility, users can convert their databases from an interface designed in the form of a wizard, in several simple steps. To get started, users need to select the DB file they want to convert and to connect to the Access database, and then they need to provide details on the destination database. The tool also requires for users to select the tables to be transferred, as well as to set custom transfer options. Partial / full conversion options MS Access To PostgreSQL makes it easy for users to transfer only parts of the original database to PostgreSQL, based on their needs. For that, users just need to select the tables they want to move, as well as to choose whether to convert indexes, records, column lists, and item properties. As soon as the conversion process has been completed, users can view a report on all of the operations that the tool has performed. The log includes info on the created tables and on the items that have been transferred to each of them. A fast program Users can convert databases fast when taking advantage of this utility. It makes it easy for them to browse for the desired database and to connect to Access and it also offers snappy performance when performing the conversion. All in all, MS Access To PostgreSQL is an easy-to-use, fast program for migrating from Microsoft Access to PostgreSQL. It includes an intuitive wizard-like interface, allows users to set custom conversion options, and does not require advanced computer knowledge to work. MS Access To PostgreSQL is a user-friendly piece of software that provides users with the possibility to convert their Microsoft Access Databases to PostgreSQL files.
