I tried to split it into two parts. the first I split from 3 to x. Then I got: $\frac{5x+3x^2}{2}+C$ Then the second part is from x to 4. Then I got $\frac{5x+3x^2}{2}+C$ so the answer should be $\dfrac{5x+3x^2}{2}+C$ A: Hint: factorize: $4x-3=(2x-3)(2x+1)$ and $5+7x^2=2(3x+1)(2x-1)$ Depersonalization in schizophrenic patients: a comparison with depression. When: Monday, September 30, 2013 Time: 8am – 5pm (these times are approximate) Where: 33 Observatory Place, Cambridge, MA 02138 With anyone from the National Security Agency you may have questions about the President’s directive in this past week which has raised new questions about the NSA’s reach and access to the private communications of its citizens. You would be able to ask these questions during the town meeting. Post navigation 4 comments for “Meeting to be held at the Harvard Library, Cambridge, Massachusetts” In response to CTF’s question regarding the audit: the NSA only does foreign signatory audits. OK, so if the NSA collects and processes all communications from abroad to the US, it is foreign-signatory? So then who does US signatory audits? If the NSA does such audits, doesn’t it have to be under the command of the NSA office that gets US signatory audits? Also, how does the NSA qualify 0cc13bf012
