## Dead Island Riptide Multiplayer Lan Crack For 12

Dead Island Riptide. 13 MULTI TRAINER, 31-12-2018.Q: Prevent access to the base class members of derived class in C++ Lets say I have following classes: class Base1 { public: int x; Base1() { x = 1; } }; class Base2 { public: int y; Base2() { y = 2; } }; class Derived : public Base1, public Base2 {}; Now I need to prevent derived class from accessing its base classes' members. I thought of using public access specifier so that derived class cannot access its parents' members. But I still get the following errors: error C2268: 'x': left of '.x' must be a class/struct/union; 'int' error C2227: left of '->x' must point to class/struct/union error C2371: 'Base2::x' : redefinition; different basic classes I am new to OOP in C++ so please help me. A: I think you are looking for the private access specifier instead of public. This will prevent deriving class from accessing the inherited members. class Base1 { public: int x; Base1() { x = 1; } }; class Base2 { public: int y; Base2() { y = 2; } }; class Derived : private Base1, private Base2 {}; A: If you still want to use public you can make them private: class Base1 { public: private: int x; Base1() { x = 1; } }; class Base2 { public: private: int y; Base2() { y = 2; } }; class Derived : private Base2 {}; Otherwise, you could use protected: class Base1 { protected: int x;
