Fstudio12crackzipfile The situation is similar for other unicode fonts. A: I created a little example. First we create an Arial Unicode font (and convert it into an TTF font with my converter (And then we create a png image with that font and the text "Hello". And now this works perfectly fine.

EDIT Arial Unicode MS is the commercial name of the.ttf that you mentioned. If you're going to use that font please give it a proper name to make it easily

identifiable. Q: how can I get the expected results of this code I am doing a project where I have to upload an image from file system and crop it and return the cropped image as the json response. But the problem is that when I am trying to crop an image it is only getting the last cropped image and not all the cropped images. If I try using the same code for inputting the images it works.
