VST Hosted Easymix provides you with Audio Effects and Audiosynthesizers from Synthesizer hosts with a VST plugin framework to use the tools with any DAW software. If you're looking for one of the best plugins for audio production, audio mastering and mixing, then VST Hosted Easymix provides you with the ultimate software for audio-synthesizers. Tracktion is the best, Podium hasn't been updated for almost 2 years and uses only one core of your CPU, and Studio One Prime doesn't do MIDI tracks unless you use the included instruments. Tracktion actually costs \$60, but such a deal. I bought it after playing with free Tracktion 4. Comes with a free licence for Melodyne Essentials. I also bought Studio One 3, because for \$99, the guitar amp sims plus the instruments plus another work environment was worth it!!! While it's not as complex as the ones above, someone new might want to try Audacity. You can now do your VST plugins with it. I do more automated mixing; edit the track to lower volume or raise in places, things like that so I don't have to rely on a mix performance, that's probably why I like it for my non-pro needs. I am sure it's not optimized for heavy multi-track recording. But for bare bones get er done fast stuff I like it. If I had money, I'd buy a DAW. between Audition (free old version), Audacity and even once in awhile Studio One Prime. Good enough for hobby stuff. In my opinion, Tracktion, Studio One, and Audacity are all good programs and are free. tracktion 5 (not including 4X) is by far the best. Learn the basics and you will be fine. When you feel you have it down, then start exploring. Use the built-in help system. then use the manual.

I paid £119.99 for the software and plugins a few years ago and have never regretted it. I can't say that this software has much competition because most of the modern DAWs have a lot of features, but the features that this has made me wish for them to add is mixing with virtual instruments, and multi-tracking. I know that they do a lot of work on the mixing, and could probably make it better. Only one VST instrument is included in the software, and its sound quality and functionality pales in comparison to the free instruments in GarageBand. The software comes with support for MPC Bytes, but no third-party plugins are available. It comes with three virtual instruments, each of which has a fixed feature set. Among the most popular are the piano and the guitar, but the software includes little in the way of music making utilities. The software works like LMMs, and it has plenty of helpful features that other DAWs do not. It also comes with plenty of built-in effects, and the interface is quite straightforward. However, it is not as feature-rich as LMMs in terms of its music making functionality. It only comes with one track and a multitrack sequencer. No third-party plugins are available, and the software is not compatible with Mac OS. It does include one-click mixing, but that's not very useful without the ability to record an audio file. Sometimes, all you need to set up a portable studio is an integrated mixing/recording platform. Among the few audio editors available that are Windows-based, the most popular ones are able to manage all of your mixing and recording needs. Cubase is a full-blown DAW that is not exactly lightweight, but it's a solid choice for a mobile solution. Cubase 7 is a pretty powerful tool, and its multicore support lets you run multiple apps simultaneously. 5ec8ef588b
