Navigating old images in Lightroom is just a little easier now thanks to the added drag-and-drop image properties of the Library module. In the past, you needed to click on the image, which could sometimes reveal the background. A new panel was added that lets you fill in information about the image even if it is only the background. It shows the camera model and date, exposure settings, if the file is raw or DNG, and any metadata that is available whether it be from the camera itself or from the Library module in Lightroom. You now can easily click on an image thumbnail to immediately do a web search for the image, just hover the mouse over the image thumbnail to get info about the file. The former is when you load your images in Lightroom, then use other tools such as Adobe Camera RAW for editing. With the latter, Lightroom takes on many of the functions that you'd typically use in other software, such as the Develop module in Photoshop or the brushes of most paint programs.
