Try this: Switch to the Lightroom tab and select "Lightroom Develop Mode". Now highlight any image that you like and drag it into the top area of the Lightroom window. The image will be instantly placed in the thumbnails. Notice that the image will be grouped in it's own row. You can also place your images in the Lightroom catalog directly. Open the "Library" section of Lightroom, hit the "Change Library" button and select the location where you keep your images. Next, find the image you wish to place in the catalog and open it into the **Picture** tab. Initially, only the "Very large image", "Large image", and "Medium image" sizing options are available. You can, however, select a specific format and provide the width and length measurements. In the **Large** image format, the width of 1280 pixels and the product of height × 3 would be 384 (x 384 × 3,384, non-rounded). The actual pixel size is 3264 x 2448. The color is set so that the type is white, basically making it transparent, but the black page allows the type to show through. It's really easy to grab and crop your Photoshop layer using the free version of Photos, providing you with a simple, customizable tool to help you remove unwanted items. The advantage of this

option is that the areas can be easily added or deleted without running a clipping operation. Once you have added your areas to the mask, you can use it for the different elements of the Photo Book Suite. Note: Currently, it does not work in all cases and it requires Photos. If you don't have an option to re-order your layers, or no matter what you do, they never look the way you want them, you can always use the image editor, Select>Layer>Flatten Layers. There are three ways to flatten. You can do this with layers already selected, with a selection of any of the layers, or with all layers selected. 933d7f57e6
