This software allows us to create keyboard shortcuts for GIMP and assign them to different commands. This is done in the free form by first, placing the keyword that we want to make a shortcut for in a box, and then, typing in the shortcut name. For example, I create a shortcut for the “Hue-Saturation” gradient command. I would type that in the field, and then enter the name I want it to be referred to. This name may be a color, or a layer name, or the texture name. This makes it very easy for me to edit my own

images and quickly apply the exact same filters to different layers, and also, to switch between layers as often as I need to. KEYMACRO features:

Keyboard shortcuts for more than 30 GIMP commands. Multiple shortcut lists. Uses a customizable structure for storing and organizing shortcuts.

Import functions to import or export shortcuts to or from other shortcut lists. Support for file types. Import and export function to another Keymacro enabled app. Support for language.

Customize text, font, and color. Save and restore default shortcuts. v2.2.4

Q: How to get start and end dates for a billing cycle My goal is to get the start and end date for a billing cycle (they are both DateTime), which will make it easier for my users to manage their free and paid packages. My current idea is to find the difference in the dates and filter the active records for the appropriate period of time, but I don't like it because I don't know how to find the start and end dates from the end date (because there will always be free days within the billing cycle), and also because I will have to make sure that the billing cycle never overlaps itself. Is there any easier way of doing this? Thanks! A: You can get the start and

end dates of a billing cycle by finding the first and last day of the month that is the start and end of the billing cycle. You can subtract one month from the start date, and add one month to the end date. Then, you can get the first and last day of the month by subtracting a month from the start date, and adding one month to the end date.

```
private static DateTime
StartBillingCycle(DateTime
billingCycleStartDate, DateTime
billingCycleEndDate) { // get first and
last day of current month
DateTime
firstDay =
Convert.ToDateTime(billingCycleStartD
ate.Month.ToString() + "01",
CultureInfo.InvariantCulture);
DateTime lastDay =
Convert.ToDateTime(billingCycleEnd
```
