When you select an object with the Quick Select tool, it sets a **bounding box** around the object. The bounding box is a stencil. It nonetheless is still very useful for deleting unwanted areas of an image quickly. Adobe has occasionally gone over the top with its tools. It happened with effects, point curves, and the gradient tool. Good color-critical users like me have almost no use for the first two, and it would be nice if the Gradient tool were a little less a user-hostile. But it's nice to have these features at all. Lightroom has some of the same sorts of tools, not to mention opacity masks and layer styles. But it's not a one-stop-shop like Photoshop is. So every program offers its own strengths and weaknesses. Personally, I prefer Lightroom over Photoshop. But there are times when Photoshop is good - I wrote an entire review on transferring the differences between the two - and I can see how people prefer it. Pick an image in the web gallery you want. On your desktop, select File > Add Layer, and then click OK on the task bar. Name your layer. Go to your blending options and select Remove Color. From here, access your filter menu by going to Edit > Filter > Edit > Filter, and then select the Radial filter. Now drag over the same image to apply your filter. Select your layer, then go to Edit > Transform > Warp. Choose the default settings or customize it with different options, such as angles and scale if you want to create a warping effect. Try rotating your layer and select black and white to see how techniques like these work. Then add a gradient overlay and a drop shadow to make the colors pop. Keep rotating until you like the final effect. Delete the original layer to save space. If you want to create a brush and apply it to your layer, go to Edit > Select > Create a Brush. Select the brush you would like to create and click OK on the task bar. Then click on your image in the Layers Panel and call it a day. Open up your Brush Preset Library or go to File > New > Brush Preset. You'll be able to select from a wide range of shapes, textures, and colors to find the perfect brush for your project. From there, click OK on the task bar to apply your brush to the image. Create a new text layer, call it what you'd like. Select the font you would like to use and click OK on the task bar. Now scroll through the list of fonts to find the one that's suitable for your design. Select Layer > Artistic > Size > Adjust > Desaturate. Select the text layer and use the Eraser tool to add some strokes to it. 933d7f57e6
