As mature as Photoshop Elements is (it must be nearly into its 20s as far as versions), Adobe keeps creating new features to incorporate. Often, Elements is given features before Adobe Photoshop and Adobe Photoshop Lightroom. Many of these new features are a result of Adobe Sensei Artificial Intelligence (AI) that allows otherwise complex manual tasks to be handled automatically. With fantastic toning, Adobe's latest update to Photoshop CC 2017 allows you to correct and easily get rid of red eye and other imperfections. Red Eye Corrector is a one click, point and click tool that removes red eye imperfections from photos and images with ghosting, too. The step-by-step HDR Toning Editor allows you to create sun-drenched skies, interesting clouds, and more with controls such as brightness, contrast (for more professional restoration) and alignment. Plus, new presets keep you up to date on your favorite landscape images and images of nature. With more than 170 presets, across four tone-mapping algorithms, you can find one for nearly all you need. Want to get a perfect shot of a black bear without getting a perfect shot? Even in low light, you can zap out the part of the scene that you don't want, then carefully paint in the part you do. There's also a new Noise Control tool, which reduces noise in photos that have too much to pick apart.

Filter options range from **Filter>Create new filter**, **Filter>Blur Gallery** which is default and **Filter>Wrap Stroke**. These filters work on several types of layers which include new layers, images

and texts. There are also **Filter>Adjust Colors** and **Filter>Flare** which has good options. The Bounds Selection tool allows you to place an anchor point, and then you can drag any other point inside this anchor point. You can logically see it as being the outer perimeter of the selection. With this tool, you create boundaries where you want to work on, which is much more flexible and useful than the simple cut, copy, and paste tactics of traditional selection tools. **What it does:** The Clipping Mask function allows you to define a layer to the entire rest of the page, as well as to the rest of the layers that you add below it. So the clipping mask is not traded by itself, but applied to the image and other layers. **What It Does:** The Magic Wand tool is found in all of the Adobe applications. It is used to select specific areas of an image using a selection that goes beyond the standard selection tools. It creates a pixel-perfect selection without the need to paint by hand. **What it Does:** The Path Selection tool creates a dynamic selection that will vary depending on the layer and will not be overly rigid. It is best used in large areas of a photograph where a vignette effect is desired. The vignette is a gradual softening of the image's exposure to the corners of the print. Often photographers need to add vignette to an image to soften the lights within a scene. 933d7f57e6
