One of the most recent improvements was the addition of filter and mask techniques. Prior to Lightroom 5, the only way to add effects to an image was with brushes and filters, so filters were considered to be “advanced” or “professional” effects. With Lightroom 5 you're able to add more effects, making them accessible to beginners. There's now a “Refine Edge” dialog box that shows you where the edge of the mask should be, with the ability to adjust the strength of the mask edge. While I have Touch ID, I really don't use it for it. I find it slower and I forget it's there. However, it is a useful tool in other scenarios. I wouldn't be surprised to see it get more attention as other options for accessing apps are replaced by gestures. I'm a big fan of Adobe's Creative Cloud apps, and I'm just as big a fan of Adobe Photoshop for iOS . I use it almost daily to edit my photos, create albums, and some day eventually get that killer mockup filled in with some vector elements. While the app already had all the features I wanted—and more—I do have a problem with the type of editing I do. That problem is called “separation”. Digital images have three layers—the subject, the foreground, and the background—it's how you separate them that makes the difference. In a photo editor like Photos , you have a Control panel that lets you separate the layers just by snipping a slider to the left or to the right. This interface works fine and shows you the tools you may need to correct for the separation that may exist in a photo.

Adobe Photoshop now supports the capabilities of dual monitor setups. This feature allows you to open multiple files on a single monitor simultaneously. You can even share the same browser window among different projects. You can access Photoshop's dual monitors from the interface by navigating to Window > Dual View. Drag one of the images to the secondary monitor and apply different effects and filters to both the images. Any designer who uses Adobe Photoshop will appreciate the new **Perspectives** feature. Now you can get a visual perspective of an image either from the perspective of a camera or as a sketch or landscape. The perspective view's rendering has improved, and you get various ways to enhance your works through Photoshop's Perspective features. You can choose from various camera perspectives, scene, scene lighting, sketch lighting and screen perspectives. New panel interface enables easy, fast navigation for content-aware fill and masking. Content-Aware Fill automatically replaces a grassy background with a photograph of a beach to produce a more natural look. Content-Aware Replace lets you easily replace the eyes of your character with an image of a better eye, in the same style as the other eye in the image, to produce more realistic results. For the home user, using a single instruction you can easily fill or mask a series of images at once. With a few simple clicks, you can create an incredibly powerful selection system for creating masks, selections, paths, and even undo history all in one seamless experience. Adobe Camera Raw Lightroom integration builds upon the familiar look of Lightroom Classic by making it even easier to edit images in a browser or in the desktop app. The latter contains many selection improvements, such as Advanced Descendants, which generates a mask automatically for every object while retaining the original transparent background. This makes it possible to copy and paste objects and seamlessly clone objects. The new Depth Select tool adds an extra layer of sophistication to selection by highlighting the selection area based on the closer color in the image. A new Snap to Crop command makes it easy to remove undesired portions of an image.
