In fact, some people might say, because of the level of complexity, that it demands extra powerful hardware to work at top speed. In fact, it requires almost no computing power at all. Every feature in Photoshop requires the same kind of computing power that's needed for a movie, and extremely powerful computers of course are plenty powerful enough to support all that. At an MSRP of \$649, Photoshop also doesn't include a bundled stylus, but one is available for \$49.99 through Apple's online store. You can use the new features in Photoshop as part of a Photoshop CC subscription (for \$8.99 per month) or as updates to a single monthly licence (for \$20.99 per month, or there's an annual subscription option, which costs \$699). Depending on what other Adobe software you buy, though, opting for a subscription may not work out.

Just paint with these new brushes, and the program will analyze which parts of the image to remove and which ones to leave exactly as they are.
